Common Mode Filter with ESD Protection

Functional Description

The EMI813x is a family of Common Mode Filters (CMF) with integrated ESD protection, a first in the industry. Differential signaling I/Os can now have both common mode filtering and ESD protection in one package. The EMI813x protects against ESD pulses up to $\pm 15~\rm kV$ contact per the IEC61000–4–2 standard.

The EMI813x is well-suited for protecting systems using high-speed differential ports such as MIPI D-PHY; corresponding ports in removable storage, and other applications where ESD protection are required in a small footprint package.

The EMI813x is available in a RoHS-compliant, XDFN-10 for 2 Differential Pair and XDFN-16 package for 3 Differential Pair.

Features

- Total Insertion Loss DM_{LOSS} < 3.7 dB at 2.5 GHz
- Large Differential Mode Cutoff Frequency f_{3dB} > 2.5 GHz
- High Common Mode Stop Band Attenuation
- Low Channel Resistance 6.0 Ω
- Provides ESD Protection to IEC61000-4-2 Level 4, ±15 kV Contact
- These Devices are Pb–Free, Halogen Free/BFR Free and are RoHS Compliant

Applications

- USB 3.0
- MHL 2.0
- µSD Card
- eSATA
- HDMI/DVI Display in Mobile Phones
- MIPI D-PHY (CSI-2, DSI, etc) in Mobile Phones and Digital Still Cameras

f _{3dB}	Differential Mode Cut-off Frequency	50 Ω Source and Load Termination		2.5		GHz
Fatten	Common Mode Stop Band Attenuation	@ 750 MHz		30		dB
V _{ESD}	In-system ESD Withstand Voltage a) Contact discharge per IEC 61000-4-2 standard, Level 4 (External Pins) b) Contact discharge per IEC 61000-4-2 standard, Level 1 (Internal Pins)	(Notes 1 and 2)	±15 ±2			kV
V _{CL}	TLP Clamping Voltage	Forward $I_{PP} = 8 A$ Forward $I_{PP} = 16 A$ Forward $I_{PP} = -8 A$ Forward $I_{PP} = -16 A$		8.94 13.4 -3.96 -7.62		V

Product parametric performance is indicated in the Electrical Characteristics for the listed test conditions, unless otherwise noted. Product performance may not be indicated by the Electrical Characteristics for the listed test conditions, thress otherwise noted. Floader performance may not be indicated by the Electrical Characteristics if operated under different conditions.

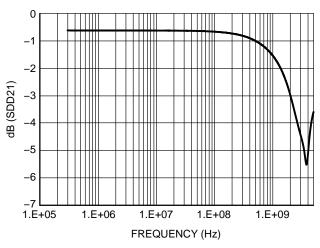

1. Standard IEC61000–4–2 with C_{Discharge} = 150 pF, R_{Discharge} = 330, GND grounded.

2. These measurements performed with no external capacitor.

3. TVS devices are normally selected according to the working peak reverse voltage (V_{RWM}), which should be equal to or greater than the DC

- or continuous peak operating voltage level.
- 4. V_{BR} is measured at pulse test current I_T .

TRANSMISSION LINE PULSE (TLP) MEASUREMENTS

Transmission Line Pulse (TLP) provides current versus voltage (I–V) curves in which each data point is obtained from a 100 ns long rectangular pulse from a charged transmission line. A simplified schematic of a typical TLP system is shown in Figure 5. TLP I–V curves of ESD protection devices accurately demonstrate the product's ESD capability because the 10 s of amps current levels and under 100 ns time scale match those of an ESD event. This is illustrated in Figure 6 where an 8 kV IEC61000–4–2 current waveform is compared with TLP current pulses at 8 A and 16 A. A TLP curve shows the voltage at which the device turns on as well as how well the device clamps voltage over a range of current levels. Typical TLP I–V curves for the EMI813x are shown in Figure 5.

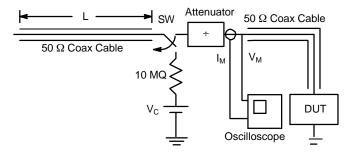

Figure 5. Simplified Schematic of a Typical TLP System

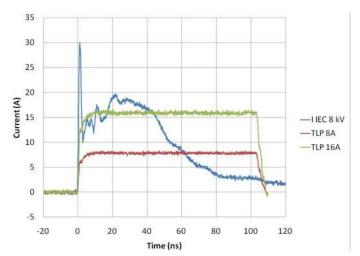

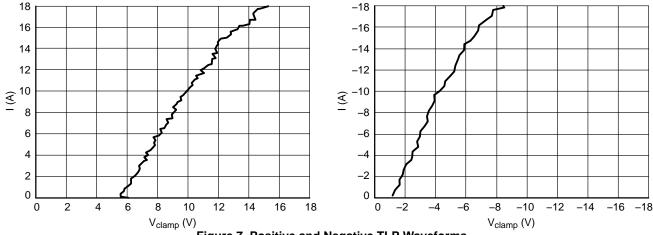

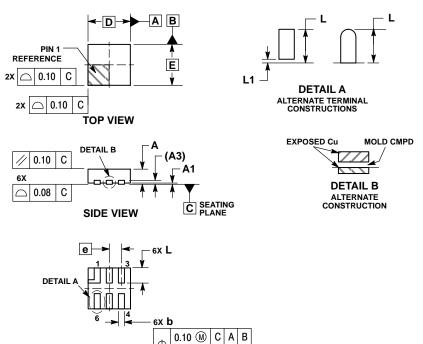

Figure 6. Comparison Between 8 kV IEC61000-4-2 and 8 A and 16 A TLP Waveforms
